Notes on Telephone Discussion with COMMO [] 1 April at 0910

STAT

1. Dave indicated that a Delta Data would be available for COMMO to submit the update to the RECSKD system. This device should be available when the project is scheduled for completion.
2. Dave indicated that the reports generated by the query system should carry a classification of Secret. This classification indication will be put in the "static" title of the query system. - *I don't think this is the best way to do this - it only prints at the top of the page, not the bottom.*
3. It was noticed by Dave that the query system does not print all 65 characters of the subject keyword field. It was noted that this was due to the excessive size of the accession number overlaying the subject printout. It was agreed to only print the seven rightmost digits of the accession number field. However, for the time being, all nine digits of the accession number will be carried internal to the system.
4. A "compress" function was agreed upon. This function would resequence the records on both the active and inactive data bases. This would be done during a file maintenance run. It was noted that the accession number is the sequence number of the records and the number is not put onto any of the file documents. This number is strictly an internally generated number.
5. I agreed to deliver shortly the following:
 - a. A quick sample listing with a nine character control field and a 65 character subject.
 - b. The nine static queries reflecting the modifications mentioned in the above #3.

STAT

I talked again to [] in his office 2 April 1975. He gave me the new query listings with 65 and 7 character fields per #5b above, and documentation on the query system. He also showed me the quick and scan capabilities he is developing-- they look excellent. I confirmed that we need the full 65 character quick capability per #5a above, which is putting him a little behind schedule, since he is trying to modify an old quick program which was poorly done and limited to 60 characters. He will call me when he has produced listings in quick and scan based on our test data.
